

# OT's Student Internship Program

Mine Geotechnical Professionals Capability Development Project at MUST

## Introduction

Oyu Tolgoi and MUST created a student internship program to significantly improve the learning outcomes of the mine geotechnical engineering program. We offers this internship to second-year students. Students participate in practical training for 14 days at Oyu Tolgoi mine site. Two faculty members supervise and lead the internship training in collaboration with OT responsible people.

*This internship program allows our students to learn real practical work experience at mine site.*

- 1.** Apply class room knowledge in a real working setting
- 2.** Learn positive working ethic and attitude
- 3.** Learn from skilled engineers
